ROI TRISTAN A. NAÑAWA

Unity Game Developer — Mobile F2P, LiveOps & Monetisation

roi.tristan723@gmail.com · Philippines (UTC+8) · Open to remote · rowee723.github.io

SUMMARY

Unity/C# game developer with 4+ years in games, nearly two of them in lead roles at Mega Cat Studios, now working on free-to-play mobile games at Stratton Studios. Builds client-side LiveOps and monetisation features from design spec to analytics: live events, leaderboards, season passes, player gifting, tiered IAP offers and feature-flagged ads. Writes backend API specs where a feature needs them. Has shipped work on WrestleQuest (published by Skybound Games), Instant Garden (iOS, real-time multiplayer), and Fill This Hole and Blockstone Island (Google Play, 10K+ downloads each). Has worked remotely with teams in the US, Ireland and Australia since 2022, working async through written specs and daily standups.

EXPERIENCE

Stratton Studios

Jul 2025 – Present

Mid Game Developer — Ireland · Australia (remote)

Three Unity 6 free-to-play mobile titles, published by Bountiful Games.

Blockstone Island

Feb 2026 – Present

Block-puzzle and island-decoration game · live on Google Play since Jan 2026 · 10K+ downloads · ads and IAP

- Implemented the Spark Fever live event on a teammate's framework: reward ladder, FTUE, banking, and fly and event-switch animations. Then became the top contributor to the live-event code, with Island Treasure fixes, an optimisation pass, and rotation and duration validation.
- Built the Star Board leaderboard in about 3 weeks as primary author: server-driven reward tiers, World/Country tabs, rank-change indicators, results screen, offline handling and analytics.
- Built player gifting on the client: reward reveal, expiry timers, failed-claim recovery and 5 funnel events. Made claims crash-safe by saving rewards before the claim request, since the server doesn't resend them if a claim is repeated.
- Co-built the AppLovin MAX ad layer: a rewarded continue behind an Amplitude A/B flag with a remote kill switch, a Daily Rewards ad variant, app-resume interstitials, and adaptive banners with a layout solver that resizes the puzzle board to fit them.
- Wrote the 10-minute poller behind remote-config and live-event refresh. Wrote the first IAP manager, since taken over by teammates, and upgraded the economy system with transaction records and analytics.
- Added 200+ EditMode/PlayMode tests (ads, live-event scheduling, gifting, banner layout) and about 11 debug tools.

Fill This Hole

Jan – Aug 2026

Casual 3D hole-puzzle game · live on Google Play since Feb 2026 · 10K+ downloads · 4.5 stars from 198 ratings

- As primary author, moved weekly leaderboards from a teammate's local, bot-based board to server-backed contests: contest lifecycle, a durable score-submission queue, World/Country boards and the claim flow. Hardened it through code review and QA.
- Extracted the leaderboard into a UPM package designed for reuse: a UI-free service, nine provider interfaces, a runtime assembly with no game dependencies, and an integration guide. It's on a feature branch and not yet integrated.
- Created the Treasure Pass season-pass controllers and built the pass with a co-developer: premium IAP unlock, reward saving, level-up animations and FTUE. Later moved it onto backend data.
- Created Goldie's Pack, a tiered IAP offer with a carousel, eligibility window and analytics, later extended by a teammate. Built pre-level Booster Reminders from a design mini-spec.

Instant Garden

Jul 2025 – Feb 2026

Real-time multiplayer farming game (Photon Fusion 2) · iOS App Store: Philippines Sep 2025, then US, UK, Canada and Australia Nov 2025

- Part of the core team through both App Store releases. 2nd most active of 15 committers, with about 20% of commits.
- Co-developed and extended the Truck Event live-ops system, moving event visuals, pet NPCs and FTUE copy onto backend data. Top contributor to the Appointment timed events, fixing race conditions in crop re-evaluation.
- Fixed Photon Fusion 2 authority and ownership bugs (owner-only visuals, projectile targeting). Moved gifting and emote RPCs to network events, and reworked friend gifting to support gifting several friends at once.
- Built content for 5+ seasonal events (about 30 crops, 20 pets, 10 eggs), plus AI for two new pets.
- Fixed 9 Sentry crash tickets in one week, made garden-database fetching error-resilient, and built UI object pools and debug commands.
- Integrated the AppLovin MAX and Axon packages, AppsFlyer IAP events and iOS 14 advertising support. Made light Node.js/Express/MongoDB backend changes.

Team and process Blockstone Island, Fill This Hole

- Worked async through backend API specs (8 on Fill This Hole), QA test cases, analytics event lists, Jira root-cause write-ups and daily EOD standups.
- Code reviewer on Blockstone Island: reviewed and merged 90+ PRs so far. Checked code-review findings against the code, fixed the valid ones and pushed back on the invalid ones. Cut internal and feature builds.
- Built features AI-assisted, directing and reviewing the output: Gemini and ChatGPT first, then Claude in Rider and Claude chat from Sep 2025, and Claude Code from Jul 2026. Wrote Claude Code skills for API-spec writing (with evals), Unity package extraction and the team's PR workflow. Set up team skills for commit summaries and pre-commit review.

Mega Cat Studios

Aug 2022 – Jul 2025

Intern to Lead Game Developer — Pittsburgh, USA (remote)

Lead Game Developer Sep 2024 – Jul 2025

Unannounced 3D Overcooked-style game · single-player, multiplayer and couch co-op · to be released on PC, Switch and PlayStation

- Made the core-systems, code-architecture and package decisions for the game.
- Led the engineering team: task assignment, design feedback and internal production sheets.
- Owned engineering delivery against client deadlines and quality expectations.

Development Lead Sep 2023 – Sep 2024

Same game, in pre-production

- Led the development department through a top-to-bottom rework of the project, and ran the test and client builds.
- Implemented most of the core gameplay systems and much of the SFX, VFX and UI scripting.
- Restructured the script architecture and made designer tools easier to use, mentored by the Head of Engineering.
- Ran Agile/Scrum sprints for the development team, and sent weekly technical and progress reports to department heads and executives.

Junior Game Developer, WrestleQuest Oct 2022 – Aug 2023

Unity RPG by Mega Cat Studios, published by Skybound Games · released Aug 2023 on PC, PlayStation, Xbox and Switch, and on mobile via Netflix Games

- Handled cinematics: created, fixed and tweaked cutscenes and quick-time events (QTEs), implemented dialogue, and set up camera work and blocking.
- Implemented and fixed VFX, including particle systems and lighting.
- Led a small team of developers that added dynamic shadows to all characters and NPCs.
- Worked combat bugs, tickets and balancing through the Aug 2023 launch, and helped ship the Steam and GOG releases.

Game Development Intern, WrestleQuest Aug 2022 – Oct 2022

- Rotated through the cinematics, SFX, VFX, UI, gameplay and design departments, fixing bugs in each.

SKILLS

- **Engine & languages:** Unity 6, C#, Android, iOS, JavaScript/Node.js (light); also some C/C++ and Unreal Engine
- **Architecture:** OOP and design patterns, service-based architecture, DI/service locator, event bus, remote config, ScriptableObject data, JSON saves, UPM packages/asmdefs
- **LiveOps & monetisation:** live events, leaderboards, season passes, gifting, tiered IAP offers, economy systems, feature flags (Amplitude A/B variants), analytics funnels
- **SDKs, multiplayer & backend:** AppLovin MAX (including adaptive banners and Axon), Amplitude, AppsFlyer, Unity IAP, VoxelBusters Essential Kit, Photon Fusion 2, REST/JSON APIs, Node.js/Express/MongoDB (light)
- **Quality & tools:** Unity Test Framework (EditMode/PlayMode), Sentry crash triage, optimisation (UI object pooling, live-event scripts and assets), DOTween, Git/GitHub, Jira, Slack
- **AI-assisted development:** Claude Code (custom skills, evals), Claude in JetBrains Rider, Claude, ChatGPT, Gemini
- **Process & leadership:** code review, QA test cases, API specs, Agile/Scrum, team leadership, task planning

---

EDUCATION

De La Salle University

Sep 2018 – Dec 2022

BS Interactive Entertainment, Major in Game Development · GPA 3.3 — Manila, Philippines

- **Honorable Mention**, Class of 2022 (Dec 2022)
- **Thesis: Operation S.Y.B.E.R.** (Unity, C#, Android): a 2D educational maths platformer for Grades 3–6, beta-tested at a local elementary school with 100+ participants.
